MISSION STATEMENT

NUCAP Industry's mission statement is simply stated – market leadership through production and process innovation.

NUCAP's focus on "What If?" has established NUCAP as a clear leader in the search for more efficient, effective and imaginative answers to the complex challenges facing automotive manufacturing at every level.

This philosophy has led to a stream of production and manufacturing innovation driving significant growth during NUCAP's 7- year history, and a commitment to developing new solutions that benefit our clients – in product performance and production efficiencies.

PRODUCT AND SERVICES

NUCAP designs and manufactures an extensive line of Disc Brake Backing plates, Disc Brake Hardware and NVH Insulators for both Original Equipment and Aftermarket Disc Brake Friction Pad Manufactures.

NUCAP's NRS (NUCAP Retention System) is setting new standards for retention and shear in both standard and heavy-duty disc brake backing plates. To answer the growing demand for NRS, NUCAP has established NRS licensees in both Europe and Japan, providing a global coverage through the market leaders in Disc Brake Backing Plate Manufacturers in each of these markets.

Nu-Blanking, a NUCAP-developed conventional stamping process that delivers fine-blank tolerances in critical plate abutment areas is currently being adapted in O.E., with the first program launched in 2002 and an increasing number of platforms for 2003.

During the fall of 2002, NUCAP will launch its newest product initiative, NU-Shim. NU-Shim is an updated shim mounting system that supercedes substandard or non-performing Shim locator and adhesions systems.

RESEARCH AND DEVELOPMENT

In our 7-year history, NUCAP had delivered a constant stream of new product initiatives and designs to products, tooling and manufacturing methodology. These initiatives have driven our rapid growth, incorporating solutions for the challenges that a growing number of Brake Systems and Friction Manufactures bring to us.

This history of innovation has allowed us to establish a number of patents for our technologies, and garnered NUCAP the prestigious PACE award in North America, an award program for Suppliers to the Automotive Industry, for innovation in products and methodologies.

QUALITY STANDARDS

QS 9000 and ISO 9002 Certified, NUCAP meets or exceeds all established Quality Protocols for automotive part manufacturing in North America. NUCAP has established both at-machine checking and standards protocols and robust oversight and quality analysis methodologies.

NUCAP growth into the provision of O.E. parts has made the formalization of NUCAP's inherent internal commitment to quality a necessity.
